Activation energies, fractal ion gating kinetics, Analysis of, 93:97
Activity patterns, of auditory neurons, interpretation of, Spectro-temporal, 93:31
Adair model, for ligand–receptor binding, Dynamics of the, 97:137
Advantageous mutants, Fixation probabilities for, a note on multiplication and sampling, 95:37
Age, cell, distribution, of suspension culture with feed and/or drain, Theory of, 97:61
Age-dependent population dynamics, Stable control in, 95:53
Age-grouped population models, asymptotic behavior of, Sampling properties of, 95:161
Age-structured populations, optimal sex ratio for, The, 93:181
Alternative stochastic framework for estimating pure measures of fertility, An, 96:117
Analysis of fractal ion channel gating kinetics: kinetic rates, energy levels, and activation energies, 93:97
Analytic solution of a dynamic pool model incorporating constant marginal cost and discount rates, 95:139
Aspherical interface, in the cornea of schizochroal eyes of phacopid trilobites, shape of, a theoretical study of: Geometric optics of trilobite eyes, 96:79
Asymmetric division, Effects of, on stochastic model, of the cell division cycle, 96:165
Asymptotic behavior, of age- or stage-grouped population models, Sampling properties of, 95:161
Auditory neurons, activity patterns of, interpretation of, Spectro-temporal, 93:31
Autocorrelation functions, single-channel, A note on, 97:17
Behavior, asymptotic, of age- or stage-grouped population models, Sampling properties of, 95:161
Behavior, stable limit cycle, in the spread of infectious disease, with special application to fox rabies, 95:199
Behavior patterns, Sociobiology and structural stability of, 93:117
Bellman Prize, The, 94:159
Bifurcation, Hopf, and stable limit cycle behavior in the spread of infectious disease, with special application to fox rabies, 95:199
Biochemical systems, intact, A comparison of variant theories of. I. Enzyme–enzyme interactions and, 94:161
Biochemical systems, intact, A comparison of variant theories of. II. Flux-oriented and metabolic control theories, 94:195
Biochemical systems theory, Strategies for representing metabolic pathways within: reversible pathways, 94:239
Biological growth and spread modeled by systems of recursions. I. Mathematical theory, 93:269
Biological growth and spread modeled by systems of recursions. II. Biological theory, 93:297
Biological interacting model, nonlinear elliptic, Global positive coexistence of, 97:1
Biological theory, Biological growth and spread modeled by systems of recursions. II, 93:297
Births, Distribution of, in an abrupt sequence: A stochastic model, 95:1

Books received, 95:245
Boosting, natural, stage-specific malaria vaccines dependent on, population effects of, Modeling malaria vaccines II, 94:115
Bulk flow, Effect on diffusion through a pore, 95:99
Cancer chemotherapy with immunostimulation: a nonhomogeneous stochastic model for drug resistance I. One drug case, 97:145
Cell age distribution of suspension culture with feed and/or drain, Theory of, 97:61
Cell division cycle, stochastic model of, Effects of asymmetric division on, 96:165
Centered variable, purine/pyrimidine codon occurrence with, A study of, 97:161
Charged tracer, unidirectional flux transient of, analysis of, Heterogeneity of membrane transport quantified by, 94:31
Chemostat, food web in, Successful invasion of, 93:249
Chemotherapy, Cancer, with immunostimulation: a nonhomogeneous stochastic model for drug resistance I. One drug case, 97:145
Codon occurrence, pyrimidine/purine, A study of, 97:161
Coexistence, Global positive, of a nonlinear elliptic biological interacting model, 97:1
Combined and free oxygen flows, Transfers between, in determining facilitated transport with membranes on the transport path, 95:199
Compartment, non-well-mixed, Effect of, on diffusion through a pore, 95:99
Compartmental model, indistinguishability, A methodology for, 96:141
Compartmental models, mammillary, generalized linear, oscillations in, Hidden, 93:79
Compartmental models, nonlinear, identifiability analysis of, Similarity transformation approach to, 93:217
Compartment models, unidentifiable, Parameter space boundaries for, 97:27
Competition, two-species, Lotka–Volterra model, Diffusion mediated persistence in, 95:65
Computational issues of importance to the inverse recovery of epicardial potentials in a realistic heart-torso geometry, 97:85
Constant marginal cost, and discount rates, dynamic pool model incorporating, Analytic solution of, 95:139
Control, metabolic pathway, Effects of product inhibition in, 96:255
Control, periodic, of infectious plant disease, efficacy of, How to estimate, 93:15
Controls, Stable, in age-dependent population dynamics, 95:53
Core, necrotic, Effects of, mathematical models of tumor growth. IV, 97:121
Cornea, of schizochroal eyes of phacopid trilobites, aspherical interface in, shape of, a theoretical study of: Geometric optics of trilobite eyes, 96:79
Corrigendum, 94:153, 94:157, 96:129
Cost, constant marginal, and discount rate, dynamic pool model incorporating, Analytic solution of, 95:139
Culture, suspension, with feed and/or drain, cell age distribution in, Theory of, 97:61
Density-dependent Leslie matrix model, A, 95:179
Diffusion, Population, in a two-patch environment, 95:111

Diffusion, through a pore, Effect of non-well-mixed compartment and bulk flow on, 95:99
Diffusion-mediated persistence in two-species competition Lotka–Volterra model, 95:65
Discount rates, and constant marginal cost, dynamic pool model incorporating, Analytic solution of, 95:139
Discrete population models, stability of, A note on, 95:189
Discrete-time epidemic models, On the formulation of, 95:27
Disease, infectious, Persistence of, in a subdivided population, 96:239
Disease, infectious, spread of, Hopf bifurcation and stable limit cycle behavior, with special attention to fox rabies, 95:199
Division, asymmetric, Effects of, on a stochastic model of the cell division cycle, 96:165
Drain, suspension culture with, cell age distribution in, Theory of, 97:61
Drug resistance, nonhomogeneous stochastic model for, I. One drug case, Cancer chemotherapy with immunostimulation, 97:145
Dynamic pool model, incorporating constant marginal cost and discount rates, Analytic solution of, 95:139
Dynamics, linear stochastic, Mean and quasideterministic equivalence for, 93:1
Dynamics of the Adair model for ligand–receptor binding, 97:137
Efficacy, of periodic control of infectious plant disease, How to estimate, 93:15
Elliptic biological interacting model, nonlinear, Global positive coexistence of, 97:1
Energy, levels, fractal ion gating kinetics, Analysis of, 93:97
Entropy, population, Growth rate, and perturbation theory, 93:159
Environment, two-patch, Population diffusion in, 95:111
Enzyme–enzyme interactions, and biochemical systems theory, A comparison of variant theories of intact biochemical systems. I, 94:161
Enzyme rate equations, A method for writing of: application to the estimation of the number and size of key proton families, 95:13
Epicardial potentials, in a realistic heart–torso geometry, inverse recovery of, Computational issues of importance in, 97:85
Epidemic models, discrete-time, On the formulation of, 95:27
Epidemiological model for direct and indirect transmission of typhoid fever, An, 96:33
Equations, enzyme rate, A method for writing of: application to the estimation of the number and size of key proton families, 95:13
Equivalence, Mean and quasideterministic: for linear stochastic dynamics, 93:1
Ergodicity, Weak, of population evolution processes, 96:195
ESS model, exponential, application to frequency-dependent selection, An, 96:185
Evolution processes, population, Weak ergodicity of, 96:195
Exponential ESS model and its application to frequency-dependent selection, An, 96:185
Eyes, schizochroal, cornea of, aspherical interface in, shape of, a theoretical study of: Geometric optics of trilobite eyes, 96:79
Eyes, trilobite, Geometric optics of: a theoretical study of the shape of the aspherical interface in the cornea of schizochroal eyes in phacopid trilobites, 96:79
Facilitated transport, with membranes on the transport path, determining of, Transport between free and combined oxygen flows in, 95:209
Facultative mutualism, with populations interacting in a food chain, A mathematical model of, 97:235
Feed, suspension culture with, cell age distribution in, Theory of, 97:61
Fertility, pure measures of, estimating of, An alternative stochastic framework for, 96:117
First-passage-time models, neural, effect of random initial value in, The, 93:191

Fixation probabilities for advantageous mutants: a note on multiplication and sampling, 95:37
Flow, bulk, Effect on diffusion through a pore, 95:99
Flux-oriented theories, and metabolic control theories, A comparison of variant theories of intact biochemical systems. II, 94:195
Flux transient, unidirectional, of charged tracer, Heterogeneity of membrane transport quantified by, 94:31
Follow-the-leader (FTL) gaits, continuous, A study on: an effective walking algorithm over rough terrain, 97:199
Food chain, populations interacting in, facultative mutualism with, A mathematical model of, 97:235
Food web, in a chemostat, Successful invasion of, 93:249
Fox rabies, spread of, Hopf bifurcation and stable limit cycle behavior, special application to, 95:199
Fractal ion channel gating kinetics, Analysis of: kinetic rates, energy levels, and activation energies, 93:97
Free and combined oxygen flows, Transfers between, in determining facilitated transport with membrances on the transport path, 95:209
Frequency-dependent selection, exponential ESS model application to, An, 96:185
Frequency statistic, evaluation compared to, A study of the purine/pyrimidine codon occurrence with a reduced centered variable and, 97:161
Function method, Green's, for analysis of oxygen delivery to tissue by microvascular network, A, 96:61
Gaits, follow-the-leader (FTL), continuous, A study on: an effective walking algorithm over rough terrain, 97:199
Gating kinetics, fractal ion channel, Analysis of: kinetic rates, energy levels, and activation energies, 93:97
General sensitivity theory, implicit methods from, Use of, to develop a systematic approach to metabolic control. I. Unbranched pathways, 94:271
General sensitivity theory, implicit methods from, Use of, to develop a systematic approach to metabolic control. II. Complex systems, 94:289
Generalized linear mammillary compartmental models, oscillations in, Hidden, 93:79
Geometric optics of trilobite eyes: a theoretical study of the shape of aspherical interface in the cornea of schizochroal eyes of phacopid trilobites, 96:79
Global positive coexistence of a nonlinear elliptic biological interacting model, 97:1
Green's function method for analysis of oxygen delivery to tissue by microvascular network, A, 96:61
Growth, Biological, and spread, modeled by systems of recursions. I. Mathematical theory, 93:269
Growth, Biological, and spread, modeled by systems of recursions. II. Biological theory, 93:297
Growth rate, population entropy, and perturbation theory, 93:159
Harvest model, optimal, with random prices, Species preservation in, 95:125
Heart–torso geometry, realistic, inverse recovery of, Computational issues of importance to, 97:85
Heterogeneity of membrane transport quantified by the analysis of a unidirectional flux transient of charged tracer, 94:31
Hidden oscillations in generalized linear mammillary compartmental models, 93:79
Hopf bifurcation and stable limit cycle behavior in the spread of infectious disease, with special application to fox rabies, 95:199
Identifiability analysis, of nonlinear compartmental models, Similarity transformation approach to, 93:217
Immunostimulation, Cancer chemotherapy with: a nonhomogeneous stochastic model for drug resistance I. One drug case, 97:145
Implicit methods, from general sensitivity theory, Use of, to develop a systematic approach to metabolic control. I. Unbranched pathways, 94:271
Implicit methods, from general sensitivity theory, Use of, to develop a systematic

approach to metabolic control. II. Complex systems, 94:289
Infectious disease, Persistence of, in a subdivided population, 96:239
Infectious disease, plant, periodic control of, efficacy of, How to estimate, 93:15
Infectious disease, spread of, Hopf bifurcation and stable limit cycle behavior in, with special attention to fox rabies, 95:199
Inhibition, product, Effects of, in metabolic pathway: stability and control, 96:255
Initial value, random, effect of, in neural first-passage-time models, The, 93:191
Input design, Optimal: case study of the metabolic process, 97:179
Intact biochemical systems, A comparison of variant theories of. I. Enzyme–enzyme interactions and biochemical systems theory, 94:161
Intact biochemical systems, A comparison of variant theories of. II. Flux-oriented and metabolic control theories, 94:195
Interface, aspherical, in the cornea of schizochroal eyes of phacopid trilobites, shape of, a theoretic study of, Geometric optics of trilobite eyes, 96:79
Key proton families, estimation of, number and size of, A method for writing enzyme rate equations: application to, 95:13
Kinetics, gating, fractal ion channel, Analysis of: kinetic rates, energy levels, and activation energies, 93:79
Law of small numbers for a mutation process, A, 95:85
Leslie matrix model, density-dependent, A, 95:179
Life expectancy, for the Rayleigh and Weibul distributions, Bounds on, 96:95
Ligand–receptor binding, Adair model for, Dynamics of the, 97:137
Like-with-like preferences and sexual mixing models, 96:221
Limit cycles, uniqueness of, Conditions for, in general predator–prey systems, 96:47
Linear mammillary compartment models, generalized, oscillations in, Hidden, 93:79
Linear stochastic dynamics, Mean and quasideterministic equivalence for, 93:1
Lotka–Volterra two-species competition model, Diffusion-mediated persistence in, 95:65
Malaria vaccines, Modeling, I: new uses for old ideas, 94:87
Malaria vaccines, Modeling, II. population effects of stage-specific malaria vaccines dependent on natural boosting, 94:115
Mammillary compartmental models, linear, generalized, oscillations in, Hidden, 93:79
Marginal cost, constant, and discount rates, dynamic pool model incorporating, Analytical solution of, 95:139
Mathematical model, of a facultative mutualism with populations interacting in a food chain, A, 97:235
Mathematical models, of tumor growth. IV. Effects of a necrotic core, 97:121
Mathematical theory, Biological growth and spread modeled by systems of recursions. I, 93:269
Matrix model, Leslie, density-dependent, A, 95:179
Mean and quasideterministic equivalence for linear stochastic dynamics, 93:1
Membrane transport, quantified by the analysis of a unidirectional flux transient of charged tracer, Heterogeneity of, 94:31
Membranes, on transport path, facilitated transport with, determining of, Transfers between free and combined oxygen flows in, 95:209
Metabolic control, systematic approach to, development of, Use of implicit methods from general sensitivity theory to, I. Unbranched pathways, 94:271
Metabolic control, systematic approach to, development of, Use of implicit methods from general sensitivity theory to, II. Complex systems, 94:289
Metabolic control theories, A comparison of variant theories of intact biochemical systems. II, 94:195
Metabolic pathway, Effects of product inhibition in: stability and control, 96:255
Metabolic pathways, within biochemical systems theory, Strategies for representing: reversible pathways, 94:239
Metabolic process, case study of, Optimal input design, 97:179
Microvascular networks, oxygen delivery to tissue by, analysis of, A Green's function method for, 96:61

Modeling malaria vaccines I: new uses for old ideas, 94:87
Modeling malaria vaccines II: population effects of stage-specific malaria vaccines dependent on natural boosting, 94:115
Multiplication, a note on, Fixation probabilities for advantageous mutants, 95:37
Mutants, advantageous, Fixation probabilities for, a note on multiplication and sampling, 95:37
Mutation process, small numbers for, A law of, 95:85
Mutualism, facultative, with populations interacting in a food chain, A mathematical model of, 97:235
Nå–Hirsch model, First, two variables of, 94:45
Natural boosting, stage-specific malaria vaccines dependent on, population effects of, Modeling malaria vaccines II, 94:115
Necrotic core, Effects of, mathematical models of tumor growth. IV, 97:121
Neural first-passage-time models, random initial value in, effect of, The, 93:191
Neurons, auditory, activity patterns of, interpretation of, Spectro-temporal, 93:31
Nonhomogeneous stochastic model for drug resistance I. One drug case, Cancer chemotherapy with immunostimulation, 97:145
Nonlinear compartmental models, identifiability analysis of, Similarity transformation approach to, 93:217
Nonlinear elliptic biological interacting model, Global positive coexistence of, 97:1
Non-well-mixed compartment, Effect of, on diffusion through a pore, 95:99
Numbers, small, for a mutation process, A law of, 95:85
Optics, Geometric, of trilobite eyes: a theoretical study of shape of the aspherical interface in the cornea of schizochroal eyes of phacopid trilobites, 96:79
Optimal harvest model, with random prices, Species preservation in, 95:125
Optimal input design: case study of the metabolic process, 97:179
Optimal sex ratio for age-structured populations, The, 93:181
Oscillations, Hidden, in generalized linear mammillary compartmental models, 93:79
Oxygen delivery, to tissues, by microvascular networks, analysis of, A Green's function method for, 96:61
Oxygen flows, free and combined, Transfers between, in determining facilitated transport with membranes on the transport path, 95:209
Parameter space boundaries for unidentifiable compartment models, 97:27
Periodic control, of infectious plant disease, efficacy of, How to estimate, 93:15
Permanence, result on, Two predators feeding on two prey species, 96:1
Persistence, Diffusion-mediated, in two-species competition Lotka–Volterra model, 95:65
Perturbation theory, Growth rate, population entropy and, 93:159
Phacobid trilobites, schizochroal eyes of, cornea of, aspherical interface in, shape of, a theoretical study of: Geometric optics of trilobite eyes, 96:79
Plant, disease, infectious, periodic control of, efficacy of, How to estimate, 93:15
Population, subdivided, infectious disease in, Persistence of, 96:239
Population diffusion in a two-patch environment, 95:111
Population dynamics, age-dependent, Stable controls in, 95:53
Population effects, of stage-specific malaria vaccines dependent on natural boosting, Modeling malaria vaccines II, 94:115
Population entropy, Growth rate, and perturbation theory, 93:159
Population evolution processes, Weak ergodicity of, 96:195
Population models, age- or stage-grouped, asymptotic behavior of, Sampling properties of, 95:161
Population models, discrete, stability of, A note on, 95:189
Populations, age-structured, optimal sex ratio for, The, 93:181
Pore, diffusion through, Effect of non-well-mixed compartment and bulk flow on, 95:99
Positive coexistence, Global, of a nonlinear

elliptic biological interacting model, 97:1
Predator–prey systems, general, limit cycles in, uniqueness of, Conditions for, 96:47
Predators, Two, feeding on two prey species: a result on permanence, 96:1
Preferences, Like-with-like, and sexual mixing models, 96:221
Prey species, two, Two predators feeding on: a result on permanence, 96:1
Prey systems, –general predator, limit cycles in, 96:47
Prices, random, optimal harvest model with, Species preservation in, 95:125
Product inhibition, Effects of, in metabolic pathways: stability and control, 96:255
Proton families, key, number and size of, estimation of, enzyme rate equations application to, A method for writing, 95:13
Purine/pyrimidine codon occurrence with a reduced centered variable and an evaluation compared to the frequency statistic, A study of, 97:161
Pyrimidine/purine codon occurrence with a reduced centered variable and an evaluation compared to the frequency statistic, A study of, 97:161
Quasideterministic equivalence for linear stochastic dynamics, 93:1
Rabies, fox, spread of, Hopf bifurcation and stable limit cycle behavior, special application of, 95:199
Random initial value, effect of, in neural first-passage-time models, The, 93:191
Random prices, optimal harvest model with, Species preservation in, 95:125
Rayleigh distribution, life expectancy for, Bounds on, 96:95
Receptor–ligand binding, Adair model for, Dynamics of the, 97:137
Recursions, systems of, Biological growth and spread modeled by. I. Mathematical theory, 93:269
Recursions, systems of, Biological growth and spread modeled by. II. Biological theory, 93:297
Reversible pathways, Strategies for representing metabolic pathways within biochemical systems theory, 94:239
Rough terrain, effective walking algorithm over, A study of continuous follow-the-leader (FTL) gaits, 97:199
Sampling, a note on, Fixation probabilities for advantageous mutants, 95:37
Sampling properties of the asymptotic behavior of age- or stage-grouped population model, 95:161
Schizochroal eyes, of phacopid trilobites, cornea of, aspherical interface in, shape of, a theoretical study of: Geometric optics of trilobite eyes, 96:61
Selection, frequency-dependent, exponential ESS model application to, An, 96:185
Sensitivity theory, general, implicit methods from, Use of, to develop a systematic approach to metabolic control. I. Unbranched pathways, 94:271
Sensitivity theory, general, implicit methods from, Use of, to develop a systematic approach to metabolic control. II. Complex systems, 94:289
Sex ratio, optimal, for age-structured populations, The, 93:181
Sexual mixing models, Like-with-like preferences and, 96:221
Similarity transformation approach to identifiability analysis of nonlinear compartmental models, 93:217
Single-channel autocorrelation functions, A note on, 97:17
Small numbers, for a mutation process, A law of, 95:85
Sociobiology and the structural stability of behavior patterns, 93:117
Species preservation in an optimal harvest model with random prices, 95:125
Spectro-temporal interpretation of activity patterns of auditory neurons, 93:31
Spread, modeled by systems of recursions. I. Mathematical theory, 93:269
Spread, modeled by systems of recursions. II. Biological theory, 93:297
Stability, of discrete population models, A note on, 95:189
Stability, metabolic pathway, Effects of product inhibition in, 96:255
Stability, structural, of behavior patterns, 93:117
Stable controls in age-dependent population dynamics, 95:53
Stable limit cycle behavior, in the spread of infection, with special application to fox rabies, 95:199

Stage-grouped population models, asymptotic behavior of, Sampling properties of, 95:161
Stage-specific malaria vaccines, dependent on natural boosting, population effects of, Modeling malaria vaccines II, 94:115
Stochastic dynamics, linear, Mean and quasideterministic equivalence for, 93:1
Stochastic framework, An alternative, for estimating pure measures of fertility, 96:117
Stochastic model, of cell division cycle, Effects of asymmetric division on, 96:165
Stochastic model, Distribution of births in an abrupt sequence, 95:1
Stochastic model, nonhomogeneous, for drug resistance. I. One drug case, Cancer chemotherapy with immunostimulation, 97:145
Structural stability of behavior patterns, 93:117
Subdivided population, infectious disease in, Persistence of, 96:239
Successful invasion of a food web in a chemostat, 93:249
Survival model and estimation of time to tumor, A, 94:1
Suspension culture, with feed and/or drain, cell age distribution in, Theory of, 97:61
Temporal interpretation of activity patterns of auditory neurons, 93:31
Terrain, rough, an effective walking algorithm over, A study of continuous follow-the-leader (FTL) gaits, 97:199
Time epidemic models, discrete, On the formulation of, 95:27
Time models, neural, first-passage, effect of random initial value in, The, 93:191
Time to tumor, A survival model and estimation of, 94:1
Tissues, oxygen delivery to, by microvascular networks, analysis of, A Green's function method for, 96:61
Torso, geometry, realistic, inverse recovery of, Computational issues of importance to, 97:85
Tracer, charged, unidirectional flux transient of, analysis of, Heterogeneity of membrane transport quantified by, 94:31
Transformation approach, Similarity, to identifiability analysis of nonlinear compartmental models, 93:217
Transport, facilitated, with membranes on the transport path, determining of, Transfers between free and combined oxygen flows in, 95:209
Transport path, membranes on, facilitated transport with, determining of, Transfers between free and combined oxygen flows in, 95:209
Trilobite eyes, Geometric optics of: a theoretical study of the shape of the aspherical interface in the cornea of schizochroal eyes of phacopid trilobites, 96:79
Tumor, time to, A survival model and estimation of, 94:1
Tumor growth, Mathematical models of. IV. Effects of a necrotic core, 97:121
Two-patch environment, Population diffusion in, 95:111
Two-species competition, Lotka–Volterra model, Diffusion-mediated persistence in, 95:65
Typhoid fever, transmission of, direct and indirect, An epidemiologic model for, 96:33
Unbranched pathways, Use of implicit methods from general sensitivity theory to develop a systematic approach to metabolic control. I, 94:271
Unidentifiable compartment models, Parameter space boundaries for, 97:27
Unidirectional flux transient, of charged tracer, Heterogeneity of membrane transport quantified by, 94:31
Uniqueness of limit cycles, Conditions for, in general predator–prey systems, 96:47
Vaccines, malaria, Modeling, I: new uses for old ideas, 94:87
Vaccines, malaria, Modeling, II: population effects of stage-specific malaria vaccines dependent on natural boosting, 94:115
Variable, centered, purine/pyrimidine codon occurrence with, A study of, 97:161
Walking algorithm, effective, over rough terrain, A study of continuous follow-the-leader (FTL) gaits, 97:199
Weibull distribution, life expectancy for, Bounds on, 96:95
